REPORT REVIEWED BY

Richard Wilkinson (Service Manager)

DESCRIPTION

Safemaster Safety Products, a height safety and compliance consultancy, and system design/manufacture/install/certification provider has been commissioned by Taigum Square to carry out an audit, inspection and recommendations, followed by re-certification of the roof safety systems installed on Taigum Square, QLD 4018.

This report is presented in relation to a comprehensive roof safety system audit, inspection and re-certification carried out by Safemaster's team of competent inspectors on 29th April 2017, which includes obtaining documentation ahead of the inspection, inspecting all existing roof safety equipment, checking policies and procedures at site level, and interviewing Taigum Square's health and safety representatives on site.

EXECUTIVE SUMMARY

Safemaster Safety Products were engaged by Taigum Square to conduct an Audit and recertify the working at heights safety systems and equipment at the Taigum Square in Taigum, Queensland.

The purpose of the audit was to identify and communicate any risks and non-compliance issues at the centre that don't comply with the Australian Standards, Codes of Practice, Acts and Regulations and to form a basis for defining a safe system of work for staff and contractors as required under the current legislation.

Taigum Square is a sub-regional shopping centre approximately 23,151m² consisting of 1 main building and various out-buildings. Included in this report is the main shopping mall structure.

Safemaster conducted the audit on the 29/04/2017. The layout plans for the height safety system were not available. Safemaster has established its own layout plan from the audit. The audit was conducted by Mr James Townsend. The review of the audit was completed by Mr Richard Wilkinson.

Safemaster gained access to the main roof area via the internal main access steps in a general store. The height safety system at the Taigum Square mainly consists of anchor points, walkway systems, handrails and ladders. There are many major main plant decks that hold the serviceable items, and some of the HVAC and mechanical equipment are spread over the roof. In the main, the access and egress ways to the serviceable items are installed and are in good order and condition. The layout and serviceability of the anchor points was found to be in compliance with the current standards.

Included in this report is a list of non-compliant issues that are identified in our findings and recommendations. Safemaster recommends that all items are addressed stating from the most severe as soon as possible. In addressing the items of non-compliance Taigum Square will be addressing the key performance requirements for providing a suitable access and egress safety system on the Taigum Square.

1. METHODOLOGY

1.1 INSPECTION METHODOLOGY

The audit has been carried out by Safemaster's team of competent inspectors to evaluate the roof safety system on Taigum Square, QLD 4018.

The audit and inspection is based on:

- Risk Assessment- Hierarchy of Control
- Safemaster Blueprints
- Vicinity Risk Matrix
- Work Health and Safety Regulations 2012
- Managing the Risk of Falls at the Workplace
- AS/NZS 1891 (Series)- Industrial Fall Arrest Systems and Devices
- AS/NZS 5532-2013 'Anchor Points'
- AS/NZS 1319-1994 'Safety Signs for the Occupational Environment'
- AS/NZS 1657-2013 'Fixed Platforms, Walkways, Stairways and Ladders- Design, Construction and Installation'

The inspection was conducted on all roof levels, with careful visual examination of all existing roof safe equipment, including photographic documentations of various potential hazards (refer to section 2.1 Finding & Recommendations).

TESTING INSTRUMENT

Product: HILTI Tester

1.2 RISK ASSESSMENT

HAZARD IDENTIFICATION

In performing the hazard identification in association with roof works at Taigum Square, QLD 4018, the following activities have been identified as possibly exposing workers to falls:

- General maintenance of the structural and external elements of the building such as window/gutters/downpipes cleaning and general roof and facade repairs and maintenance
- Periodic maintenance and repair of roof mounted mechanical systems on a fragile roof surface and near an unprotected open edge
- Work on sloping or slippery surface where it is difficult to maintain balance
- Other tasks requiring workers to access the roof or work at height

RISK ASSESSMENT & CONTROL

In performing the risk assessment and risk control, it is clear that the elimination risk control strategy is not practical as the needs for maintenance or repairing the building are unavoidable. The risk for workers exposed to significant fall hazards has been assessed as **high**.

As control measures, Taigum Square has made effort to implement a permanent roof safety system to manage the risks of workers falling from height to as low as is reasonably practicable.

The existing permanent equipment to provide and maintain a safe system of work, includes:

- Fall prevention system (Handrail system) to prevent a person falling any distance, or where this is not practicable,
- An Access system (Permanent ladders and Stairs, Walkway, Signage) to allow a person to gain access to a work area safely and,
- A Fall arrest system (Anchorages) to stop a falling person under safe conditions by limiting the distance and/or force of the fall, as it is not reasonably practicable to provide a fall prevention/work positioning system.

HIERARCHY OF CONTROL

HAZARD IDENTIFICATION & RISK ASSESSMENT

Identify the hazards (eg a fall) and assess the likelihood and consequence of each

ELIMINATION

Eliminate the need to access the fall-risk area, e.g, by relocating plant or items requiring inspection or maintenance

SUBSTITUTION

Provide alternative means of access to the point or item which avoids the risk of fall

ISOLATION

Barricade or enclose the fall risks so that it cannot be reached

FALL PROTECTION

Provide personal protective equipment which either prevents a fall or reduces the risk or severity of a fall or, in the event of a fall, minimizes the risk of injury

2. AUDIT & INSPECTION

3. ATTACHMENTS

3.1 DEFINITIONS

Anchorage	A secure point of attachment on a rigid structure for attachment of a working line, safety line, fall arrest device or other elements of a rigging system. Anchors must be capable of withstanding a load of 22kN in the direction of load without failing
Body Containment Device	A device designed to contain the body of a worker and to distribute forces resulting from an arrested fall to minimise the injury. They consist of a full body harness together with associated components such as lanyard and personal energy absorber. Alternatively, body containment devices may be used to restrain individuals from falling where use is solely restricted to fall-restraint
Competent person	A person who has, through a combination of training, education and experience, acquired knowledge and skills enabling that person to correctly perform a specified task. Ref: AS1891 Section 2.2.11
Connector	A device used to couple (connect) components of a personal fall protection system or positioning device system. The connector may be an independent component (such as a karabiner) or an integral component (such as buckle or D-ring sewn into a garment) of the system. P.P.E. Connectors must be drop forged or made of equivalent materials; they must have a corrosion-resistant finish and all surfaces and edges must be smooth to prevent damage to other parts of the system
Contractor	For the purposes of this document, a contractor includes any and all sub-contractors and employees of the main contractor and as defined in the Workplace Health & Safety Act (2011) and Regulations (2011)
Free-fall/Fall Arrest	A fall or the arrest of a fall, where the fall distance before the fall-arrest system begins to take any loading is in excess of 600mm either vertically or on a slope on which it is not possible to walk without the assistance of a handrail or handline
Limited Free-Fall/Limited Fall-Arrest	A fall or the arrest of a fall, occurring under the Free-Fall/Fall Arrest conditions previously described, except that under reasonable foreseeable conditions the fall distance shall not exceed 600mm
Restrained Fall/Restrained Fall Arrest	A fall or the arrest of a fall, where the person suffering the fall is partially restrained by a device such as a pole strap, or is sliding down a slope on which it is not possible to walk without the assistance of a handrail or handline
Roof	The exterior top surface of a building
Type 1 rope grab fall arrester	A fall arrest device which travels along an anchorage line and when loaded, locks to the line
Type 2 fall arrest device	A fall arrest device from which a spring-loaded anchorage line pays out, and which locks when loaded and releases when the load is removed
WHS	Workplace Health & Safety Act (2011) and Regulations (2011)

3.2 AUSTRALIAN STANDARD REFERENCES

AS 1657:2013

3.1.4 Change in level

Where the level of a walkway above an adjacent walkway or floor is 300 mm or less, access from one level to the other may be gained without the provision of an intermediate step.
Where the change of level is greater than 300 mm but does not exceed 450 mm, a minimum of one intermediate step shall be provided. Access between adjacent levels where the difference exceeds 450 mm shall be in accordance with the requirements of Section 7 or by means of a sloping walkway complying with Section 5.

3.2 MATERIALS

3.2.3.4 Grating and expanded metal

For grating and expanded metal flooring, the smallest dimension of any opening shall not exceed 45 mm and the area of any opening shall not exceed 5000 mm². Any gap between adjacent made-up sections of grated floor shall not exceed 10 mm. The gap may be of any length.

Where straightedge bars are not fitted, the size of any opening at the joint between adjacent panels shall not exceed the requirements for openings in the grating, as given in Figure 3.1.

NOTE: For trafficable areas below a platform or landing, see Clause 4.5.

FIGURE 3.1 CLEARANCES BETWEEN ADJOINING PANELS OF GRATING

4.4 GUARDRAILING

Guardrailing complying with Section 6 shall be installed on exposed sides of platforms and landings except for the following:

- (a) At the points of access from a stairway or ladder.
- (b) Where there is a permanent structure not more than 100 mm from the edge of the platform or landing capable of providing at least the equivalent protection to guardrailing.
- (c) On the sides and edges of a platform, the level of which is not greater than 300 mm above that of an adjacent platform or floor, provided—
 - (i) the smallest dimension of the upper platform is not less than 1200 mm; and
 - (ii) the distance from any edges of the unprotected upper platform to the protection on the edge of the lower platform is not less than 1000 mm.

Where it is not possible to apply the requirement of Item (c)(ii) above, the minimum height of the protection at the edge of the lower platform shall be increased by 300 mm.

The unprotected edges of such platforms shall be marked so that they are clearly visible in their surroundings.

NOTE: Figure 4.1 illustrates guardrail details in relation to platform configurations

FIGURE 4.1 GUARDRAILS ON PLATFORMS

4.6 TOEBOARD

Where an object could fall from a platform or landing onto an area to which access by persons is available, a toeboard complying with Clause 6.1.2 shall be provided.

NOTE: This requirement need not apply where there is a permanent structure within 10 mm of the edge of the platform or landing.

7.4.3.4 Variation of bottom rung/tread spacing

The distance between the bottom rung/tread and the bottom landing shall be not less than 90% and not greater than 100% of the rung/tread spacing (see Figure 7.5).

NOTES:

- 1 This distance should be measured at the ladder centre-line where the landing has a cross-slope (see Figure 7.5).
- 2 Where possible, the distance between the landing and the first rung/tread should be equal to the rung/tread spacing.

C7.4.3.4 The allowable variations given in this Clause and the rung/tread spacing tolerances referred to elsewhere in this Standard are not equivalent; the tolerance is a manufacturing allowance and is not intended to be cumulative. The allowable variation is a dimension that may be varied intentionally by the design.

FIGURE 7.5 VARIATION OF RUNG/TREAD SPACING

OH&S REGULATIONS 1996

3.7. Access to and egress from workplace, duties of employer etc. as to

A person who, at a workplace, is an employer, the main contractor, a self-employed person or a person having control of access to the workplace must, where practicable, ensure that the means of access to and egress from the workplace-

- a. enable persons to move safely to and from the workplace; and
- b. are at all times kept free of obstructions.

Penalty: the regulation 1.16 penalty.

3.11. Warning signs

Without limiting any other requirement of these regulations for the display of signs, if, in an area of a workplace there is a hazard which may not be readily apparent to a person working in or entering the area then a person who, at the workplace, is an employer, the main contractor, a person having control of the workplace or a person having control of access to the workplace must ensure that-

- a. a sign relevant to each hazard is displayed to persons in or entering the area; and
- b. the sign complies, and is used in accordance, with AS 1319.

Penalty: the regulation 1.16 penalty.

3.55. Edge protection

- 1. A person who at a workplace, is an employer, the main contractor, a self-employed person or a person having control of the workplace must ensure that edge protection that complies with subregulation (5) is provided and kept in place whenever there is a risk that a person could fall 2 or more metres from the edge of-

- a. a scaffold, fixed stair, landing or suspended slab at the workplace; or
 - b. formwork or falsework at the workplace.

Penalty: the regulation 1.16 penalty.

- 2. A person who, at a workplace, is an employer, the main contractor, a self-employed person or a person having control of the workplace must ensure that either-

- a. edge protection that complies with subregulation (5) is provided and kept in place whenever there is a risk that a person could fall 3 or more metres from an edge at the workplace other than an edge referred to in subregulation (1); or

- b. a fall injury prevention system is provided and in operation whenever there is a risk that a person could fall 3 or more metres from an edge at the workplace other than an edge referred to in subregulation (1).

Penalty: the regulation 1.16 penalty.

- 3. When a fall injury prevention system that is designed to be attached to a person is provided in accordance with subregulation (2)(b), a person who is at risk of falling from the structure must use the system.

Penalty: the regulation 1.15 penalty.

- 4. When a fall injury prevention system that is not designed to be attached to a person is provided in accordance with subregulation (2)(b), a person who is at risk of falling from the structure must ensure, before the person ascends the structure, that the system is in operation.

Penalty: the regulation 1.15 penalty.

- 5. Edge protection must have-

- a. a top rail-
 - i. positioned not less than 900 mm and not more than 1100 mm above the working surface; and
 - ii. that is capable of withstanding a force of 0.55 kN applied to any point of the guard rail system; and
 - b. either-
 - i. a mid rail and a toe board; or
 - ii. a toe board and a mesh panel that comprises wire that is not less than 3 mm in diameter and apertures not greater than 75 mm x 50 mm and that fills the space between the top rail and the toe board.

3.57. Brittle or fragile roofing, duties of employer etc. as to work on

- 1. A person who, at a workplace, is an employer, the main contractor, a self-employed person or a person having control of the workplace must ensure that if a person is required to work on or from a roof at the workplace where brittle or fragile material forms the whole or any part of the roof then-

- a. the person to work on or from the roof is informed that the roof is wholly or in part brittle or fragile, as is relevant to the case; and
 - b. the person to work on or from the roof is provided with a safe working platform and safe access way; and

- c. the person to work on or from the roof is trained and instructed on-
 - i. the precautions to be taken; and
 - ii. how and where to access the roof; and
 - iii. how and where to gain access to the working platform or access way referred to in paragraph (b);and
- d. to the extent practicable, a warning notice bearing the words "DANGER — FRAGILE ROOFING — USE WORKING PLATFORM" is placed at each place where a person who is to work on or from the roof is to access the roof.

Penalty: the regulation 1.16 penalty.

2. Without limiting regulation 3.1, if at a workplace brittle or fragile material forms the whole or part of a roof that is to be removed, a person who, at the workplace, is an employer, the main contractor, a self-employed person or a person having control of the workplace must before the roof is removed-

- a. identify which areas of the roof are made of brittle or fragile material; and
- b. assess the stability of the structure that supports the roof and the soundness of the roof.

Penalty: the regulation 1.16 penalty.

3. A person who, at a workplace, is an employer, the main contractor, a self-employed person or a person having control of the workplace must ensure, if a person is required to work on or from a roof at the workplace where brittle or fragile material forms the whole or any part of the roof and there is a risk that that person might fall through the roof, and if there is no other practicable means of preventing the person falling through the roof, that-

- a. non-corrosive safety mesh that is capable of preventing a person falling through the roof is securely fixed directly over the top of, or directly underneath, the brittle or fragile areas; or
- b. barriers are securely fixed and adequately maintained around the brittle or fragile areas.

Penalty: the regulation 1.16 penalty.

4. A person must not remove a notice referred to in subregulation (1) without the authority of the person who caused the notice to be placed.

Penalty for a person who commits the offence as an employee: the regulation 1.15 penalty.

Penalty in any other case: the regulation 1.16 penalty.

3.3 SAFE WORK PROCEDURE

1. OBJECTIVE

Building management shall maintain documented procedures for identifying, evaluating and controlling hazards due to persons engaged in Industrial Roof Access.

2. SCOPE

This procedure shall apply to all building employees, contractors, and employees of contractors. It should be read in conjunction with the following references.

3. GENERAL REQUIREMENTS

All persons required to work at height shall first be authorised by a person with appropriate responsibility.

4. WORK PLANNING

- **Work Location, Timing and Purpose**
The location and purpose of any proposed work at height shall be identified and an appropriate risk assessment performed, including an assessment of environmental conditions.
- **Overhead Work**
Where there is any possibility that an object or person may fall to where a person may be located below, appropriate measures shall be taken to control the risk, (e.g. all hand tools secured by lanyard, exclusion zones below etc).
- **Provision for Rescue**
All work at height that involves a risk that a person may fall or suffer other trauma shall include an assessment of the method of rescue in the event of an incident occurring, and must therefore be performed by a minimum of two people.
- **Training and Supervision**
Appropriate induction, supervision, instruction and training shall be provided for any employee accessing a roof area or working at height. In particular, adequate supervision and control measures that minimise the risk of misuse of the system shall be put in place.
- **Roof Access/Egress**
Any employee required to work on the roof shall only gain access by use of the permanent access ladders as marked on the Roof map.

5. ROOF WORK

Workers exposed to falls during roof work or window maintenance shall be protected by one of the following means of fall-prevention, which appear in general order of preference:

- Edge Protection
- Scaffold
- Elevated Work Platforms
- Fall-Restraint System / Rope Suspension System

Workers shall select the most appropriate method of fall prevention, such that a total restraint system is always used as a minimum. Such a system may require use of secondary or diversion anchorages and the use of drop lines, rope-grab devices and roping techniques to avoid pendulum or swing-back effects.

At no time shall a worker place himself/herself in a location which exposes him/her to a fall, (e.g. within three metres of any unprotected edge), without first assembling and attaching to an appropriate anchorage.
